

Ohio MCH Fact Sheet

School-aged Children, Adolescents and Young Adults Deaths Caused by Motor Vehicle Crashes

MCH Block Grant Needs Assessment Information

Key Data Summary – Ohio

- The rate of death to Ohio's children 14 years and younger declined slightly from 3.0 per 100,000 in 2000-2002 to 2.3 per 100,000 in 2004-2006, as shown in the first graph.
- Black children had a motor vehicle crash death rate of 3.1 per 100,000 in 2005, slightly higher than the rate of 2.6 per 100,000 for white children, as shown in the second graph.

Healthy People 2010 Objective 15-15

- Reduce motor vehicle crash rates to 9.2 per 100,000. This objective applies to all age groups. There is no specific objective for children aged 14 and younger.

U.S./Ohio Comparison

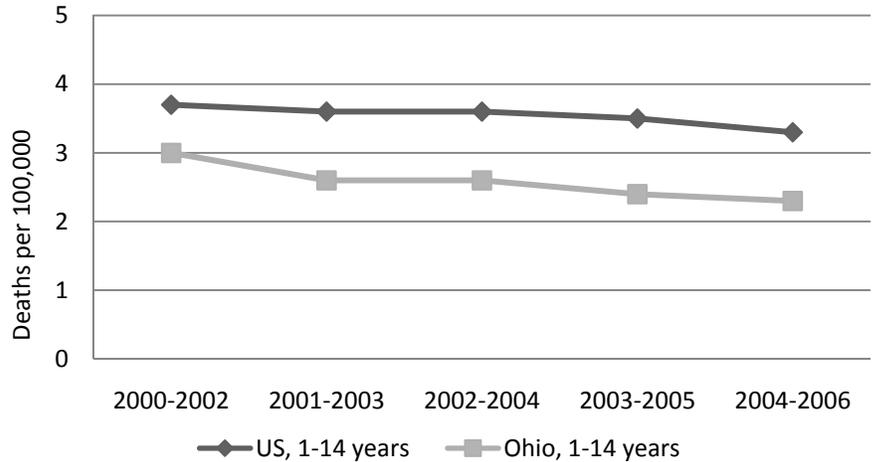

- From 2000 to 2006, the rate of motor vehicle deaths for black and white children 14 years and younger was lower in Ohio than in the United States.

Additional Information

- Motor vehicle crash is the leading cause of unintentional injury-related death among children 14 years and under.
